Clean Water Wash - KitchenAid® 404+ Dishwashers

How it Works

1. Dirty water and food particles enter pump system
2. Dirty water is pulled through the spinning micro-filter, leaving soils behind
3. Pressure waves created by the filter rotation and fixed wing-shaped blades continuously clean the Micro Filter
4. Clean, filtered water returns to the wash arms and dish load to collect more soil
5. Multiple times per cycle, a second pump flushes suspended food particles down the drain.

Vent Dry (on all new SS Tub Models w/out Fan Enabled Pro Dry)

The **Vent Dry System** helps remove warm, humid air from the dishwasher resulting in dryer dishes at the end of the cycle

How it Works:

1. The heating element pulses on and off to evaporate remaining water on dishes

2. Humid air vents out the front of the dishwasher, allowing the heater to continue evaporating water off of dishes
